HVAC DUCT CONSTRUCTION STANDARDS METAL AND FLEXIBLE

**HVAC
DUCT CONSTRUCTION
STANDARDS
METAL AND FLEXIBLE**

ANSI/AHRI 90-2008

SHEET METAL AND AIR CONDITIONING CONTRACTORS'
NATIONAL ASSOCIATION, INC.
www.smacna.org

Information Required for Duct Construction

1. A comprehensive duct layout indicating sizes, design airflows, pressure class, and routing of the duct system.
2. The types of fittings to be used based on the designer's calculations of fitting losses (i.e., square versus 45° entry taps, conical versus straight taps, etc.).

Information Required for Duct Construction

3. Use of turning vanes or splitter vanes.
4. Location of access doors.
5. Location and type of control and balancing dampers.
6. Location and types of diffusers.
7. Requirements for duct insulation.

Information Required for Duct Construction

8. Location and types of any fire protection device including fire dampers, smoke dampers, combination fire/smoke dampers, and ceiling dampers. Building codes require this information to be shown on the design documents submitted for building permit.

Information Required for Duct Construction

9. Details of offsets required to route ductwork around obstructions (columns, beams, etc.).

oPages 2.6-2.9

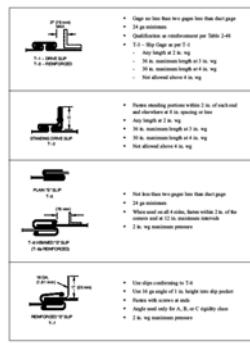

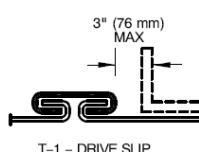

FIGURE 2-1 RECTANGULAR DUCT TRANSVERSE JOINTS

HVAC Duct Construction Standards Metal and Plastic • Third Edition

Rectangular

Rectangular Transverse Joints

T-1 - DRIVE SLIP
T-3 - REINFORCED

- Gage no less than two gages less than duct gage
- 24 ga minimum
- Qualification as reinforcement per Table 2-48
- T-3 - Slip Gage as per T-1
 - Any length at 2 in. wg
 - 36 in. maximum length at 3 in. wg
 - 30 in. maximum length at 4 in. wg
 - Not allowed above 4 in. wg

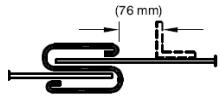

- Fasten standing portions within 2 in. of each end and elsewhere at 8 in. spacing or less
 - Any length at 2 in. wg
 - 36 in. maximum length at 3 in. wg
 - 30 in. maximum length at 4 in. wg
 - Not allowed above 4 in. wg

Rectangular Transverse Joints

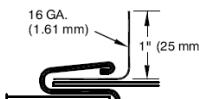

PLAIN "S" SLIP
T-5

T-6 HEMMED "S" SLIP
(T-6a REINFORCED)

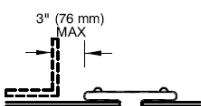

- Not less than two gages less than duct gage
- 24 ga minimum
- When used on all 4 sides, fasten within 2 in. of the corners and at 12 in. maximum intervals
- 2 in. wg maximum pressure

REINFORCED "S" SLIP
T-7

- Use slips conforming to T-6
- Use 16 ga angle of 1 in. height into slip pocket
- Fasten with screws at ends
- Angle used only for A, B, or C rigidity class
- 2 in. wg maximum pressure

Rectangular Transverse Joints

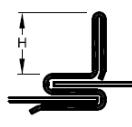

T-8 DOUBLE "S" SLIP
(T-8a REINFORCED)

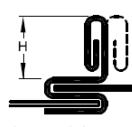

- 24 ga for 30 inch width or less
- 22 ga over 30 inch width
- Fasten to each section of the duct within 2 in. from corners and at 6 in. maximum intervals
- $\frac{5}{8}$ in. minimum tabs to close corners

STANDING S
T-10

STANDING S (ALT)
T-11

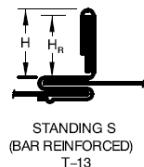

STANDING S (ALT)
T-12

- When using S on all four sides, fasten slip to duct within 2 in. of the corner and at 12 in. maximum intervals
- Any length at 2 in. wg
- 36 in. maximum length at 3 in. wg
- 30 in. maximum length at 4 in. wg
- Not allowed above 4 in. wg

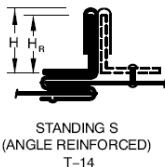

Rectangular Transverse Joints

STANDING S
(BAR REINFORCED)
T-13

- Fasten as per Joint T-10
- Standing portion as per T-10 or T-11 to hold Flat Bar
- Fasten bar stock to the connector within 2 in. of the corner and at 12 in. maximum intervals
 - Any length at 2 in. wg
 - 36 in. maximum length at 3 in. wg
 - 30 in. maximum length at 4 in. wg
 - Not allowed above 4 in. wg

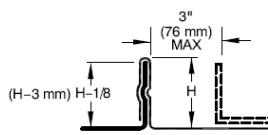

STANDING S
(ANGLE REINFORCED)
T-14

- Fasten as per Joint T-10
- Fasten angle to the connector or duct wall within 2 in. of the corner and at 12 in. maximum intervals
 - Any length at 2 in. wg
 - 36 in. maximum length at 3 in. wg
 - 30 in. maximum length at 4 in. wg
 - Not allowed above 4 in. wg

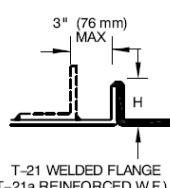

Rectangular Transverse Joints

STANDING SEAM
T-15

ANGLE REINFORCED
STANDING SEAM
T-16

- Button punch or otherwise fasten within 2 in. of each corner and at 6 in. maximum intervals
- Seal and fold corners
- Stagger joints on adjacent sides if using standing seam on all four sides
- Hammer longitudinal seam at ends of standing seam

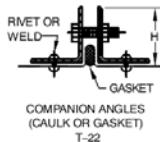

T-21 WELDED FLANGE
(T-21a REINFORCED W.F.)

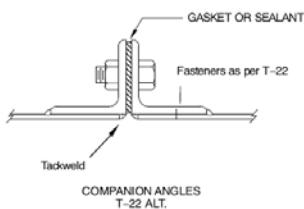

- Use $\frac{1}{2}$ in. minimum flange and end weld
- Flanges larger than $\frac{5}{8}$ in. must be spot welded, bolted, riveted or screwed to prevent separation (2 in. from ends and at 8 in. maximum intervals)
- On 24, 22 or 20 ga, brace or weld $\frac{1}{4} \times 4$ in. rod in corners or provide hangers at every joint

Rectangular Transverse Joints

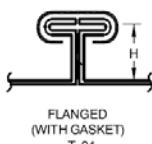

- $\frac{3}{8}$ in. minimum flange on duct
- Angles must have welded corners
- Angles must be tack welded, bolted or screwed to the duct wall at 2 in. maximum from the ends and at 12 in. maximum intervals
- Bolt Schedule:
 - $\frac{3}{8}$ in. minimum diameter at 6 in. maximum spacing at 4 in. wg or lower
 - $\frac{3}{8}$ in. angle requires 4 in. maximum spacing at 4 in. wg
 - 4 in. maximum spacing at higher pressures

- Hold duct back $\frac{1}{8}$ in. from vertical face of the angle and tack weld to the flange along the edge of the duct
- Fasten angle to duct as per T-22
- For additional tightness place sealant between the angle and duct or seal the weld
- If the faces of the angles are flush, thick consistency sealant may be used in lieu of gasket
- Use gasket suitable for the specific service and fit it uniformly to avoid protruding into the duct

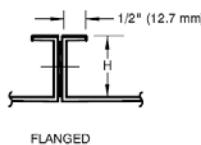

Rectangular Transverse Joints

FLANGED
(WITH GASKET)
T-24

- Assemble per Figure 2-16
- Close corners with minimum 16 ga corner pieces and $\frac{3}{8}$ in. bolts min.
- Lock flanges together with 6 in. long clips located within 6 in. of each corner
- Clips spaced at 15 in. maximum for 3 in. wg pressure class or lower
- Clips spaced at 12 in. maximum for 4, 6 and 10 in. wg
- Gasket to be located to form an effective seal

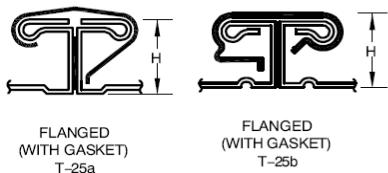

FLANGED
(WITH GASKET)
T-24A

- Bolt, rivet 1 in. maximum from ends and at 6 in. maximum intervals
- Limited to 2 in. wg pressure class
- See Figure 2-16
- Gasket to be located to form an effective seal

Rectangular Transverse Joints

FLANGED
(WITH GASKET)
T-25a

FLANGED
(WITH GASKET)
T-25b

- Assemble per Figure 2-17
- Ratings may be adjusted with EI-rated bar stock or members from Tables 2-29 and 2-30
- Supplemental members may be attached to the duct wall on both sides of the joint
- Single members may be used if they are fastened through both mating flanges
- Gasket to be located to form an effective seal

- Consult manufacturers for ratings established by performance documented to functional criteria in Chapter 11.

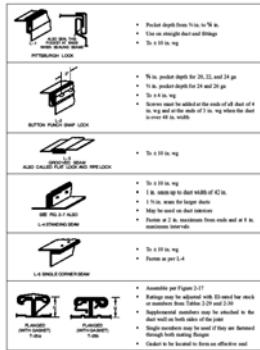

Figure 2-17

Longitudinal Seams

- Figure 2-17
- Page 2.10

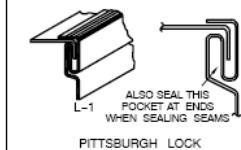

2.10 HVAC Duct Construction Standards Metal and Flexible • Third Edition

Rectangular

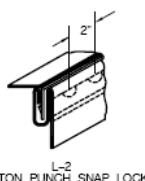

Longitudinal Seams

- Pocket depth from $\frac{1}{4}$ in. to $\frac{5}{8}$ in.
- Use on straight duct and fittings
- To ± 10 in. wg

PITTSBURGH LOCK

- $\frac{5}{8}$ in. pocket depth for 20, 22, and 24 ga
- $\frac{1}{2}$ in. pocket depth for 24 and 26 ga
- To ± 4 in. wg
- Screws must be added at the ends of all duct of 4 in. wg and at the ends of 3 in. wg when the duct is over 48 in. width

L-2 BUTTON PUNCH SNAP LOCK

Longitudinal Seams

L-3
GROOVED SEAM
ALSO CALLED FLAT LOCK AND PIPE LOCK

- To ± 10 in. wg

SEE FIG. 2-7 ALSO
L-4 STANDING SEAM

- To ± 10 in. wg
- 1 in. seam up to duct width of 42 in.
- 1 $\frac{1}{2}$ in. seam for larger ducts
- May be used on duct interiors
- Fasten at 2 in. maximum from ends and at 8 in. maximum intervals

Longitudinal Seams

L-5 SINGLE CORNER SEAM

- To ± 10 in. wg
- Fasten as per L-4

FLANGED
(WITH GASKET)
T-25a

FLANGED
(WITH GASKET)
T-25b

- Assemble per Figure 2-17
- Ratings may be adjusted with EI-rated bar stock or members from Tables 2-29 and 2-30
- Supplemental members may be attached to the duct wall on both sides of the joint
- Single members may be used if they are fastened through both mating flanges
- Gasket to be located to form an effective seal

Intermediate Reinforcement

- Figure 2-3
- Page 2.12

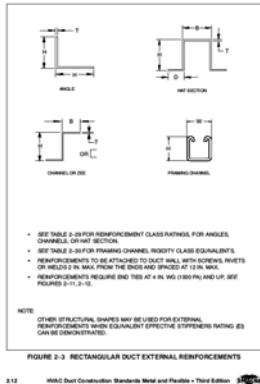

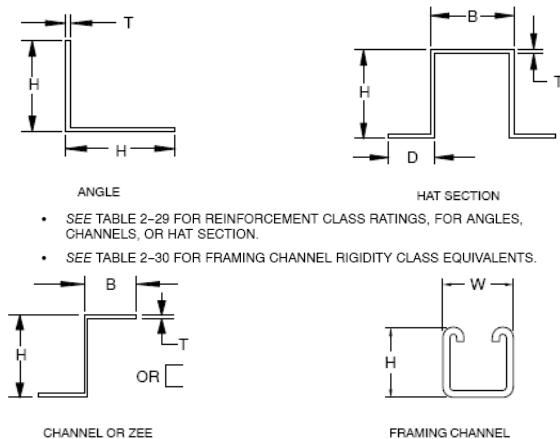

FIGURE 2-3 RECTANGULAR DUCT EXTERNAL REINFORCEMENTS

5.13 HVAC Duct Construction Standards Metal and Flexible • Third Edition

Rectangular

Intermediate Reinforcement

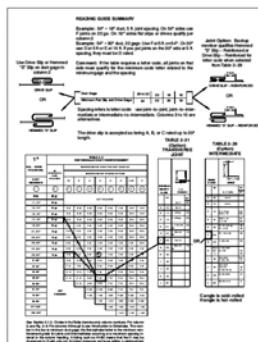

Basic Duct Construction Process

- Verify pressure class
- Check corresponding table
- Start with the larger side first
- Determine reinforcement spacing options
- Check joint reinforcement tables
- Check intermediate reinforcement tables if applicable (*tie rod options next webinar*)
- Repeat for the short side

Guide Summary (P 2.5)

- Circles are column numbers
- Number in box is the minimum gage
- First letter is minimum reinforcement class required.
- Second letter is downsized reinforcement when used with tie rod
- Xt – t means tie rod is required

In Words...

- If the box in the table shows H-20G
- The minimum panel gage is 20
- The reinforcement required is class H at the spacing noted at the top of the column (this can be a joint or intermediate reinforcement)
- You can use G instead of H if you use a tie rod as well. (If to achieve a class G you are already required to use a tie rod then you can not use this option)

Table 2-31 Transverse Joint Reinforcement

See Section 2.1.4. *Effective E is number listed times 10³ before adjustment for bending moment capacity. T-2 and T-10 through T-14 are restricted to 30 in. length at 4 in. w.g. to 36 in. length at 3 in. w.g. and are not recommended for service above 4 in. w.g. (+) indicates positive pressure use only.

Table 2-48 T-1 Flat Drive Accepted as Reinforcement

Although the flat drive slip T-1 does not satisfy the EI calculation requirements for Classes A, B or C reinforcement, tests predict its suitability for use as reinforcement within the limits of the table.

N.R. – No reinforcement is required; however, the T-1 Joint may be used.

Example 1 Solutions

- Option 1
 - Use 24 gage
 - No reinforcement required either side
- Option 2
 - Use 26 gage
 - T-1 (plain drive) on the 20 in. side at a max spacing of 10 ft
 - No reinforcement required on the 12 in. side

Intermediate Reinforcement

- Table 2-29
- Starts on page 2.70
- Covers typical intermediate reinforcement types.
- For struts see Table 2-30 on page 2.72

Example 2 Solution

- Duct gage is 20
- Joint spacing is 5 feet (56 ¼ in.)
- TDC/TDF for transverse joint
- Intermediate reinforcement (2 ½ feet)
 - G class
 - Angle 1 ½ x 1 ½ x 1/8
 - Not required on the 26 in. side

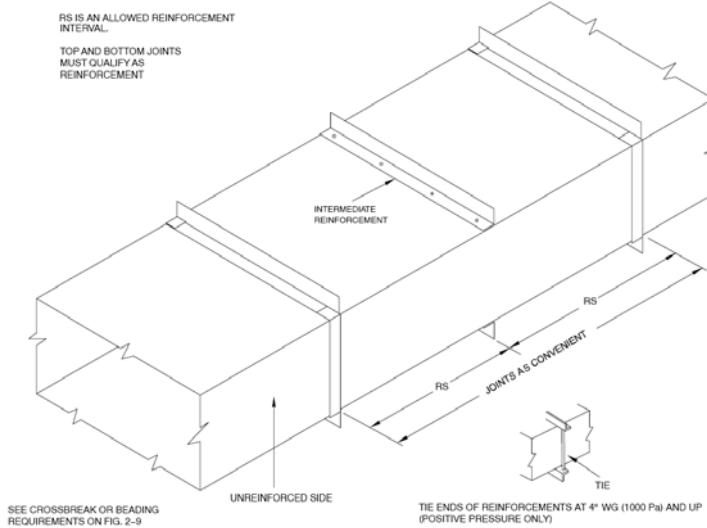

Intermediate External Reinforcement

- Reinforcement Intervals do not need to coincide
- At 4 in. positive pressure and above reinforcements must be tied
- Must be fastened to the duct within 2 in. from the corner (unless tied)
- Maximum fastener spacing is 12 in.

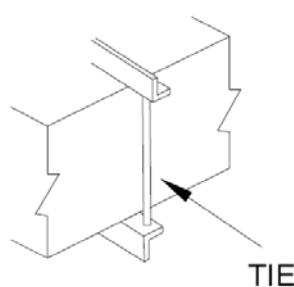

Reinforced on Two Sides

FLANGED
(WITH GASKET)
T-25b

- Assemble per Figure 2-17
- Ratings may be adjusted with EI-rated bar stock or members from Tables 2-29 and 2-30
- Supplemental members may be attached to the duct wall on both sides of the joint
- Single members may be used if they are fastened through both mating flanges
- Gasket to be located to form an effective seal

Example 3

- You can use 20 gage for the panel
- TDC/TDF needs to be 18 gage to qualify as an “H”
- What can I “ADD” to 20 gage TDC/TDF to make it an “H”?
- To get an “H” EI = 26.4
- TDC/TDF @ 20 gage = “G” = 15.8

Example 3

- “H” – “G” = $26.4 - 15.8 = 10.6$
- If you use reinforcement on each side of the joint you can divide the 10.6 by 2
- $10.6/2 = 5.3$
- What has an EI of 5.3 (or more)?
- Class “E” has an EI of 6.5

Page
2.70

Example 3

- SO...
- A "G" plus two "E"s =
- $15.8 + 2(6.5) = 28.8 = "H"$
- It's actually a little bit more than the minimum value for "H" ($EI = 26.4$) but not enough to be an "I" ($EI = 69$)
- Check the short side (30")...

Example 3

- The short side requires G-22
- We are already using 20 gage
- TDC/TDF = "G" if made from 20 gage
- Short side does not require any additional reinforcement

Solution to Example 3

- The duct will be fabricated from 20 gage
- Use TDC/TDF
- The 36" side will have 1x1x1/8 angle on either side of the joint
 - 4 per piece of duct 2 on the "top" 2 on the "bottom"
 - No ties required (negative pressure)
- The 30" side does not require any further reinforcement.
